

Manufactured by Exel Composites UK, this high performance composite system comprises of only five different lightweight components, the heaviest weighing only 25kg. Easy to transport and assemble, the system uses composite struts (where necessary) to make it 100% non-conductive. This makes it the safest, easiest and lightest trench lining product available for the installation of underground utilities.

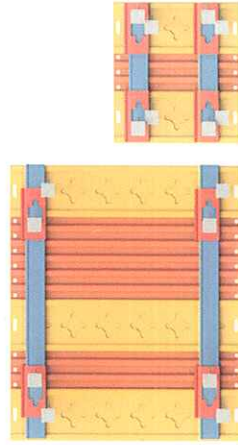

2.52m deep x 3.0m wide EZE Shoring System

Five lightweight components

2.52m EZE Hub Shore

Multiple sizes and configurations
